**DNRF in Brief:**

- The DNRF was established in 1991 as an independent organization with the objective of funding basic research at a high international level.
- In 1991 the foundation received an endowment of 2 billion DKK (267 M euro) from Parliament.
- The foundation’s lifespan was extended in 2008 and again in 2015 by capital injections of 3 billion DKK (400 M euro).
- Since 1991, the DNRF has committed itself to supporting Danish research institutions with 7.8 billion DKK (more than 1 billion euro).
- The DNRF spends approximately 430 M DKK (nearly 60 M euro) annually.
- A total of 110 centers have been established since 1993.
Introduction

This guide provides information to potential applicants who intend to submit a proposal to the Danish National Research Foundation’s 10th application round for new Centers of Excellence.

Applicants are advised to visit www.dg.dk for further information about the foundation, the Center of Excellence funding mechanism, and the existing Centers of Excellence.

The deadline for outline proposals is Thursday, November 1, 2018, at 12 noon.

Outline proposals must be written in English using an application form, which can be downloaded from www.dg.dk. The application form must be submitted as a PDF file and sent as an attachment to an e-mail to DNRFRound10@dg.dk.

Applicants are urged to contact the secretariat if they have any questions about the application process. Questions may be directed to:

Director Søren-Peter Olesen, e-mail: spo@dg.dk, tel.: +45 3318 1950

Senior Adviser Johanne Juhl, e-mail: jj@dg.dk, tel.: +45 3318 1951

Senior Adviser Gitte Tofterup Hansen, e-mail: qth@dg.dk, tel.: +45 3318 1953

The Center of Excellence Program

The objective of the Center of Excellence program is to strengthen Danish research by providing the best possible working conditions and organizational set-up for selected top researchers. Excellence is the main criterion when assessing proposals for new centers.

A center grant is large and flexible and has a duration of up to 10 years, with a first funding period of six years and, if renewed, can be extended for a second funding period of an additional four years.

Centers can be established within and/or across all research areas: Humanities, Life Sciences, Natural Sciences, Social Sciences and Technical Sciences.

The application procedure is conducted as a “bottom-up” process, and applicants from all research fields are encouraged to apply. The application process is composed of two stages. The first stage involves an assessment of the outline proposals submitted. In the second stage, a number of applicants are invited to submit full proposals. A detailed description of the funding mechanism and the application process can be found on the following pages.
What is a Center of Excellence?

Centers of Excellence (CoE) consist of units located at research institutions (the vast majority at universities) sharing a common idea or vision and an overall and clearly defined set of research objectives.

There is no fixed formula for creating a CoE. The centers may differ in size and mode of organization, depending on their subject and scope. Some centers become rather large during the grant period, employing more than 60 people divided into several research teams, while others have fewer than 15 members. The center must have a well-defined framework for cooperation. The foundation finds it essential that applicants form a joint physical community facilitating an intensive daily interaction, and centers may also choose to form partnerships with other researchers or institutions either in Denmark or abroad.

Research-based education is an important part of a center’s mission because the centers serve as important training sites for the next generation of researchers, often attracting exceptional students from Denmark and abroad. However, centers are also encouraged to engage with education and dissemination in a broader sense.

Centers are strongly encouraged to pursue collaboration with leading international researchers and to include and attract exceptional and talented employees and visitors from abroad.

Center Leader and Co-applicants

A Center of Excellence is headed by a center leader (the applicant). This leader must not only be a distinguished researcher able to show excellence in his or her own research, but must also have proven himself or herself as a visionary leader able to create a dynamic and thriving research environment. The foundation expects the center leader to work full time for the center.

Co-applicants of the proposed center are members who would play critical roles in the success of the proposed endeavor. If the proposed center is granted funding, a co-applicant would devote a specified percentage of her/his time to the center throughout the funding period and is considered to be senior/key personnel.

Setting the Scene for Highly Ambitious Research

The foundation welcomes outstanding research of a high international caliber that may be described as ambitious, highly creative, truly novel, scientifically daring, and potentially groundbreaking basic research.

Centers are expected to engage in confronting some of the large unsolved questions and to address the challenges that intrigue them the most. The philosophy is that new and partly unexpected knowledge transcending existing knowledge barriers emerges when dedicated people with high scientific standards work together to explore problems that spark their passion. In other words, the foundation welcomes curiosity-driven research – or what might be described as exceptional researchers’ ”dream projects.”

Distribution of Centers Among Scientific Fields

The foundation welcomes proposals from all fields of research. A majority of the centers can be described as interdisciplinary and, therefore, do not readily fit into one category. However, the figure below shows how the 110 centers established so far categorize their main research field.
The Budget
A center grant is large and flexible. The grant may cover expenses that are directly attributable to the center, such as salaries, travel costs and conferences, operational costs, and equipment, and which are relevant and necessary in order to carry out the project. Overhead should be included in the budget (44 percent for universities). Salaries for permanent staff are generally not funded by the foundation, while salaries for Ph.D. students, post-doctoral staff, visiting staff, and technical and administrative staff may be included.

When submitting an outline proposal, applicants are asked to include an estimated budget for a six-year period covering applied funding from the foundation.

In the second phase, if invited to submit full proposals, applicants are asked to include a total comprehensive budget estimate for the proposed center. The foundation expects a high level of financial commitment from the host institution, which must be reflected in the budget and clearly described in the support letter from the host institution.
Assessment and Selection

Calls for new centers are announced approximately every two and a half years, and they involve a two-stage application process. In the first stage, prospective center leaders are invited to submit short outline proposals. In the second stage, applicants are invited to submit full proposals that are reviewed by three international experts in the field. Prior to the final selection, the board interviews each applicant.

Outline proposals are solely reviewed by the board of the foundation, which consists of nine members who possess insight into research at the highest international level. Thus, the applicants should pay attention to the fact that the outline proposals are written for educated laymen, not peers within their discipline. Only invited full proposals are sent for peer review.

The overall success rate from submission of outline proposals to establishment of a center has been about 6 percent in the two previous application rounds. About 15 percent of the outline proposals have moved on from the outline stage to the full application phase, and 30-40 percent of those proposals have resulted in new Centers of Excellence.

Submission of Outline Proposals
Outline proposals must be written in English using an application form, which can be downloaded from www.dg.dk. The application form must be submitted as a PDF file and sent as an attachment in an e-mail to DNRFRound10@dg.dk.

The foundation must receive all proposals no later than Thursday, November 1, 2018, by 12 noon.

Please refer to the application form for specific details about the content of the application.
Full Proposals

When invited to submit full proposals, applicants should further develop the outline proposal following the guidelines set by the foundation. The full proposal should consist of:

- A visionary presentation (max five pages or 12,000 characters incl. spaces) expanding the overall research idea, including:
  - A description of its dimension of novelty and potential for groundbreaking results and an argument for its scientific relevance and expected impact.
  - A strategy for addressing the challenges. How will the center be organized? Which competencies/capacities will be involved, including the roles of the co-applicants? How will a strong, creative, and dynamic research environment be established? With which institution(s) will it be affiliated? What are the qualifications of the proposed center leader (scientific as well as managerial skills)? Will specific initiatives be made to attract young and talented researchers? How do the applicants plan to attract international researchers? What sort of international collaboration is envisaged? How will the research activities relate to existing Danish research in this area?

- A description of the planned research program (max 10 pages or 24,000 characters incl. spaces, excl. necessary references).

- CV of the proposed center leader, including a brief and concise outline of his or her professional career (max 4,800 characters incl. spaces). Further, the CV must include:
  - A list of the proposed center leader’s ten most important publications.
  - A paragraph summarizing which work has had the greatest importance and impact.
  - Total number of publications within the categories: articles, monographs, book chapters, proceedings, other.
  - A list of publications from the last ten years (optional).

- CVs for each of the participating co-applicants, including a brief and concise outline of his or her professional career (max 2,400 characters incl. spaces per CV). Further, the CVs must include:
  - A list of the co-applicants’ five most important publications.
  - Total number of publications within the categories: articles, monographs, book chapters, proceedings, other.

- A detailed budget for a six-year period covering the applied funding from the DNRF and also including financial commitment from the host institution and funding from other sources.

- A list of any funds granted and/or pending applications for grants for the same purposes as the proposed center.

- A letter of support from the host institution signed by the Head of Department and the Dean documenting its commitment to the proposal. The foundation expects the host institution to commit with a high level of co-financing, which must be described in the letter.
• A letter of declaration signed by the proposed center leader that states a full-time commitment to the center. Also included must be a statement that both the proposed center leader and all co-applicants agree on the full proposal and that they have read the Privacy Policy on www.dg.dk. The letter must be signed by the co-applicants.

Before submitting a full proposal, both the proposed center leader and the co-applicants are encouraged to visit the foundation’s website www.dg.dk for information on the foundation’s Privacy Policy (privatlivspolitik).

Assessment Criteria
In assessing both the outline proposals and the full proposals, the foundation will emphasize the following dimensions:

• The research idea is ambitious and original and has the potential for real scientific breakthroughs in the relevant research field(s).

• The proposed center leader has a high standing in the international research community as well as managerial skills.

• The center includes high-quality personnel in order to establish a creative and dynamic international research environment that will provide an inspirational training ground for young researchers.

• The focus, structure, and size of the proposed center are such that the center sets the stage for scientific ventures that are not feasible within conventional funding from other sources.

The Peer-Review Process
The DNRF will send full proposals to three international high-level experts within the relevant research area(s) for external peer review. The reviewers should possess at least the same international standing as the applicants. Each reviewer is asked to deliver a report of three to five pages addressing a number of crucial questions. Reviewers are not asked to rank or grade the proposal. The Guide for Reviewers, which informs the reviewers of their task, is available for applicants at www.dg.dk.

Before the DNRF sends the proposals to the reviewers, both reviewers and applicants are asked to declare a possible conflict of interest. If such a conflict is identified, the reviewer will not be used.

Each applicant may submit the names of three experts, one of whom will be chosen by the foundation to serve on the panel of reviewers who will assess the proposal. The foundation will choose the other two reviewers based on recommendations from external or internal sources. Before the foundation assembles the panel, the applicant will be given the opportunity to comment on the list of proposed reviewers’ professional complementarity. The foundation has chosen this process in order to ensure that the composition of the expert panel is relevant to the applicant’s field of study.

The foundation uses an open and transparent process. Reviewers and applicants will know each other’s identities. Applicants will be able to comment on the reviews prior to the board’s final selection.
Interview with Applicants
The board of the DNRF conducts a short interview with each applicant (proposed center leader) prior to the final selection. Interviews for this round of applications are expected to be conducted on October 2-3, 2019. During the interview, the applicant is asked to present the overall research idea and to elaborate on the strategy for realizing the idea.

Board Processing and Selection
The board bases its selection on the full proposals, the three peer reviews for each proposal, the applicant’s responses to the reviews, and the interview. The quality of the reviews received is generally very high, and the reviews usually provide valuable advice to the board as well as to the applicants/centers. However, although the reviews serve as very important input to the board’s selection, it is the board that makes the final selection. The board has thorough discussions of each proposal, arguing in each case why a proposal should or should not be funded. Ultimately, the board must choose to fund relatively few research proposals from a large number of exceptional proposals.

Contract Negotiations
After the board makes its final selection, the foundation and the center leader initiate negotiations with the host institution regarding significant co-financing, office and laboratory space, and plans for the center after support from the foundation ends. It should be noted that no funding is granted before the final contract has been signed. Further information may be requested in this phase, e.g., CPR identification number.

An official inauguration of the new center is held shortly after it starts operating.

Overall Time Frame
Outline proposals must be submitted electronically to DNRFRound10@dg.dk. The foundation must receive all proposals no later than Thursday, November 1, 2018, by 12 noon. The application form can be downloaded from www.dg.dk.

The board will assess the outline proposals at a meeting on January 30-31, 2019. By mid-February, a number of applicants will be asked to submit full proposals. The deadline for submission of full proposals is expected to be April 25, 2019.

Extensive peer review of each full proposal will be carried out during the spring/summer of 2019, and the board will make its final selection on funding at a meeting at the beginning of October 2019. Prior to making its selection, the board will conduct an interview with each proposed center leader.

The foundation will enter into contract negotiations with the host institutions during the fall/winter of 2019, and if the negotiations are concluded successfully, new centers may be operating by early 2020.
